| <b>Standard:</b><br><br>NFPA 470, 2022 edition<br>11.4.3.3 |  | <b>Task</b><br><b>Over-pack a radioactive package. Rolling Slide-in-Method</b>   |                               |           |      |           |      |
|  |  | <b>Conditions and Outcome</b><br>Provided with the proper equipment and tools the candidate, with the assistance of another candidate, shall overpack a radioactive package/ container. Candidates shall follow the principles of A.L.A.R.A. Competency is demonstrated by performing all steps correctly and in the proper order. |                               |           |      |           |      |
| Number   | Task Steps   | First Test   |                               | Retest #1 |      | Retest #2 |      |
|  |  | Pass   | Fail                          | Pass      | Fail | Pass      | Fail |
| 1  | Selects, and readies leak detection /monitoring equipment  |  |                               |           |      |           |      |
| 2  | Monitors the environment immediately surrounding the container/package to be overpacked                            |  |                               |           |      |           |      |
| 3  | Identifies control requirements and selects the appropriate technique for product control as identified by the AHJ |  |                               |           |      |           |      |
| 4  | Identifies and communicates safety concerns to assisting personnel.  |  |                               |           |      |           |      |
| 5  | Selects the appropriate PPE based on the characteristics of the material   |  |                               |           |      |           |      |
| 6  | Selects tool that are compatible with the material   |  |                               |           |      |           |      |
| 7  | Selects a location to perform the control operation safely and efficiently.  |  |                               |           |      |           |      |
| 8  | Completes the monitoring requirements for the specific material.   |  |                               |           |      |           |      |
| 9  | Follows safety procedures to minimize/avoid safety hazards   |  |                               |           |      |           |      |
| 10   | To the extent possible, avoids direct contact with the hazardous material to include residual material             |  |                               |           |      |           |      |
| 11   | Positions the overpack container at approximately a 30-degree angle to the base of the damaged container.          |  |                               |           |      |           |      |
| 12   | Ensures the area is free of obstructions.  |  |                               |           |      |           |      |
| 13   | With assistance, both containers are rolled so that the damaged container is inserted into the overpack container  |  |                               |           |      |           |      |
| 14   | Continues rolling process until most of the damaged container is within the confines of the overpack container.    |  |                               |           |      |           |      |
| 15   | Using proper lifting techniques lifts the overpack container into the upright position.                            |  |                               |           |      |           |      |
| 16   | Close the overpack container following the manufacturer's instructions.  |  |                               |           |      |           |      |
| 17   | Mark & label the overpack container following any applicable regulations and the AHJ requirements                  |  |                               |           |      |           |      |

|  |   |  |  |  |  |  |  |
